[Your Full Name]

CYBERSECURITY & VAPT PRACTITIONER

[City, Country] | [Professional Email] | [LinkedIn URL] | [GitHub URL]

PROFESSIONAL SUMMARY

Aspiring cybersecurity practitioner with documented hands-on experience in an authorized virtual lab. Experience includes vulnerability assessment, controlled penetration testing, web security testing, Windows security reviews, memory-forensics exercises, network analysis, endpoint event monitoring and risk-based VAPT documentation. Emphasis on ethical testing, reproducible evidence and clear remediation advice.

TECHNICAL CAPABILITIES

Offensive security: Nmap, Nessus, Metasploit lab exercises, Kali Linux, SQLmap, DVWA, Mutillidae, SQL injection and LFI testing.

Defensive and monitoring: Windows Event Viewer, Wazuh agent setup/troubleshooting, Avast/EICAR validation, Windows security policy and hardening review.

Forensics and network: Volatility, Practice_1.vmem, Wireshark, TCP/IP, SHA-256 integrity verification, Hyper-V, GNS3 and Linux CLI.

Framework familiarity: NIST CSF, NIST SP 800-53, CIS Controls, OWASP WSTG, ISO/IEC 27001 and MITRE ATT&CK.

FEATURED CAPSTONE PROJECT

Vulnerability Assessment & Penetration Testing — Comprehensive Cybersecurity Lab Assessment

Scope: Kali Linux, Windows 7, Metasploitable 2 and intentionally vulnerable training web apps.

- Built and tested a constrained virtual lab with configured networking and phased VM usage.
- Assessed exposed network services; validated the intentionally exposed root bind shell on TCP 1524 with root identity evidence.
- Investigated DVWA LFI and Mutillidae SQLi behavior with baseline and response/timing evidence; did not claim data extraction.
- Practiced memory analysis using Practice_1.vmem and packet inspection with Wireshark; compared SHA-256 checksums.
- Reviewed Windows failed-logon Event ID 4625 locally and configured Wazuh; centralized alert ingestion was not fully verified.
- Consolidated findings, limitations, risk severity and remediation suggestions into VAPT documentation.

ADDITIONAL LABORATORY WORK

Wireless WEP capture analysis (Aircrack-ng) • Network scanning (Nmap / Nessus) • Windows endpoint security • Digital forensics • Wazuh troubleshooting • Simulated phishing SOAR playbook design (INC-001)

EDUCATION & CERTIFICATIONS

Qualification: [Degree / Qualification] | Institution: [College / University] | Year: [Graduation Year]

Training: [Cybersecurity Course / Training Institute]

Verified certifications: [Add completed certifications and credential links only]

DRAFT — Update identity, education, credentials and contacts before sharing. All practical work described is authorized laboratory experience; no paid industry experience or production SOAR deployment is implied.
